

Smelter Service Corporation is a nationally recognized aluminum recycling company located in Mt. Pleasant, Tennessee. Since 1978, we have helped conserve the world's natural resources while treating our customers, suppliers, employees, and community fairly and honestly.

For a quarter of a century, Smelter Service Corporation has been providing our customers with the highest quality recycled aluminum in the industry.

SSC, headquartered in the community of Mt. Pleasant, Tennessee, has built its reputation on the small town values of excellent quality and superb service, all delivered at a competitive price. We have also been in the forefront of companies that care about the preservation of our environment.

In 2000, in an effort to further support corporate headquarters' community, Smelter Service Corporation's CEO Jim Barrier founded Kids On Stage Foundation of Maury County. This is a unique philosophy of learning in which the arts are integrated with the school's core curriculum, and is a partnership with Maury Country Public School System and Mt. Pleasant Middle School of The Visual and Performing Arts.

After an initial ten years of growth, SSC developed a "Vision for the Future" in 1988. We looked at our beginnings, our position in the industry at that time, and where we wanted to be in the next decade. Based on that vision, we totally rebuilt our Mt. Pleasant operations with extensive investments in new technologies that would

protect the environment as well as increase productivity and quality.

Over the years, SSC has continued to improve its aluminum recycling process with still newer technology and state-of-the-art monitoring equipment. This technology, combined with our carefully trained and capable workforce, has enabled us to achieve the highest recovery rates in the industry. All this has been possible while using less energy in the processing of each unit of recyclable material.

SSC is committed to achieving the highest recognition by our peers and customers for total product value. Through an internal goal-setting and vision-setting program, we will be a single corporate team dedicated to providing a top quality product with superlative service, at an absolutely competitive price.

SSC's success has been based on our Total Value concept where **Quality, Service, and Price** intersect for our customers. Our corporate vision is to be recognized as the best aluminum recycler in terms of total value. We will do this by paying even more attention to this critical intersection.

As we strive to be the best aluminum recycler in our industry, we know that it is vitally important to focus on what is most important to our customers. After listening to them extensively and gaining the experience of years in the business, we believe we have made a difference with them.

We expect our team to create ingots that are clean, safe and solid, made through the most accurate chemistry. Our service will feature reliable information provided to our customers, followed up with dependable pickups and deliveries. And our prices will

be absolutely competitive. All this attention to detail produces a total value that endorses our leadership in the aluminum recycling industry.

The Total Value Triangle represented below links these vital components into a unified whole - our approach to our business every day.
